- A*
- > All light passes into the thin flame of the eye
 - > It flickers around solid objects
 - > Deciding their place and form
 - > The endless task of absorbing experience in its entirety, and of mastering it
 - > This language of things, and perhaps it alone
 - > Authorises a knowledge of the individual no light could now dissolve in ideal truths
 - > The gaze is no longer reductive
 - > It is that which establishes the individual in his irreducible quality.
 - > And thus it becomes possible to organize a rational language around it

O

- > One could at last hold a scientifically structured discourse about an individual

> Where does it hurt?

What's wrong with you?

You enter the abandoned church

- > Underneath the stained glass window you find 5 strange files
- > They are full of text and images about the dawn of modern medicine, detailing something called 'the medical gaze': medical information, data about health
- > Why were they left here?
- > Did someone want you to find them?
- > As you leaf through the pages you notice some of them are red
- > On those pages are words you recognise
- > These are your medical records
- > The information has been anonymized and even partly redacted but you can tell it's you
- > You start tearing out the pages, translucent red pages flying out in fistfuls
- > Letters addressed to your childhood houses, images from x-rays, the codified lexicon of blood test results all fly past you as you frantically pull at the contents of the folders
- > But it's no use
- > For each page you pull out two more seem to appear in its place

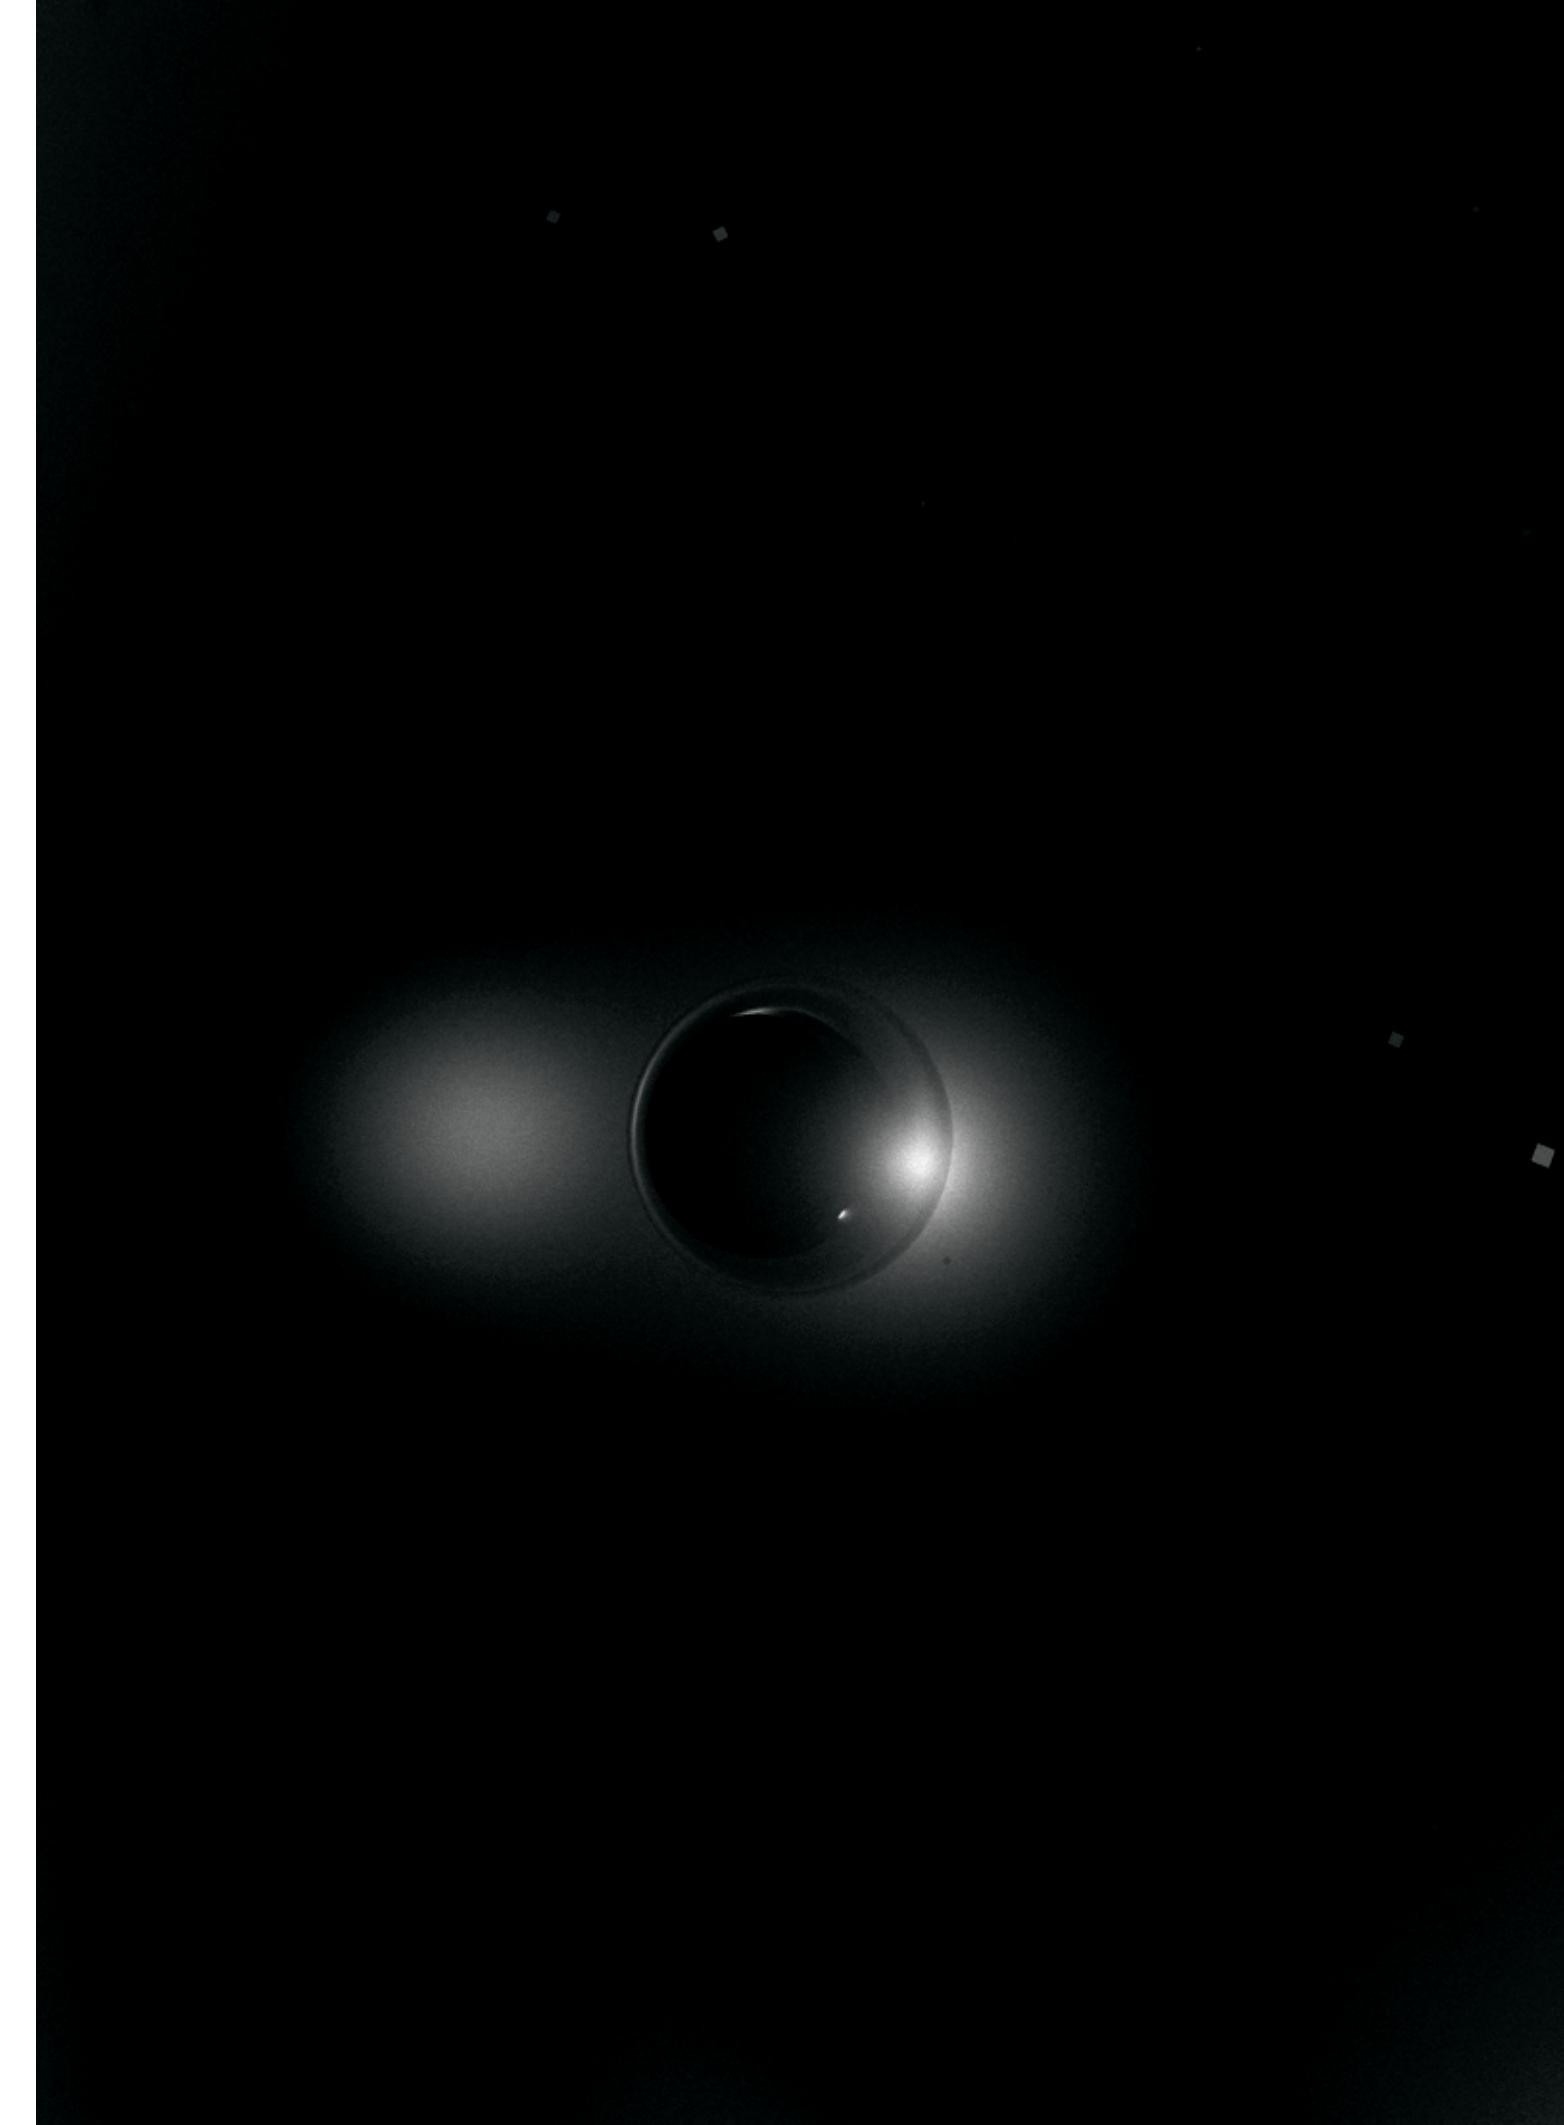

> You sink to your knees

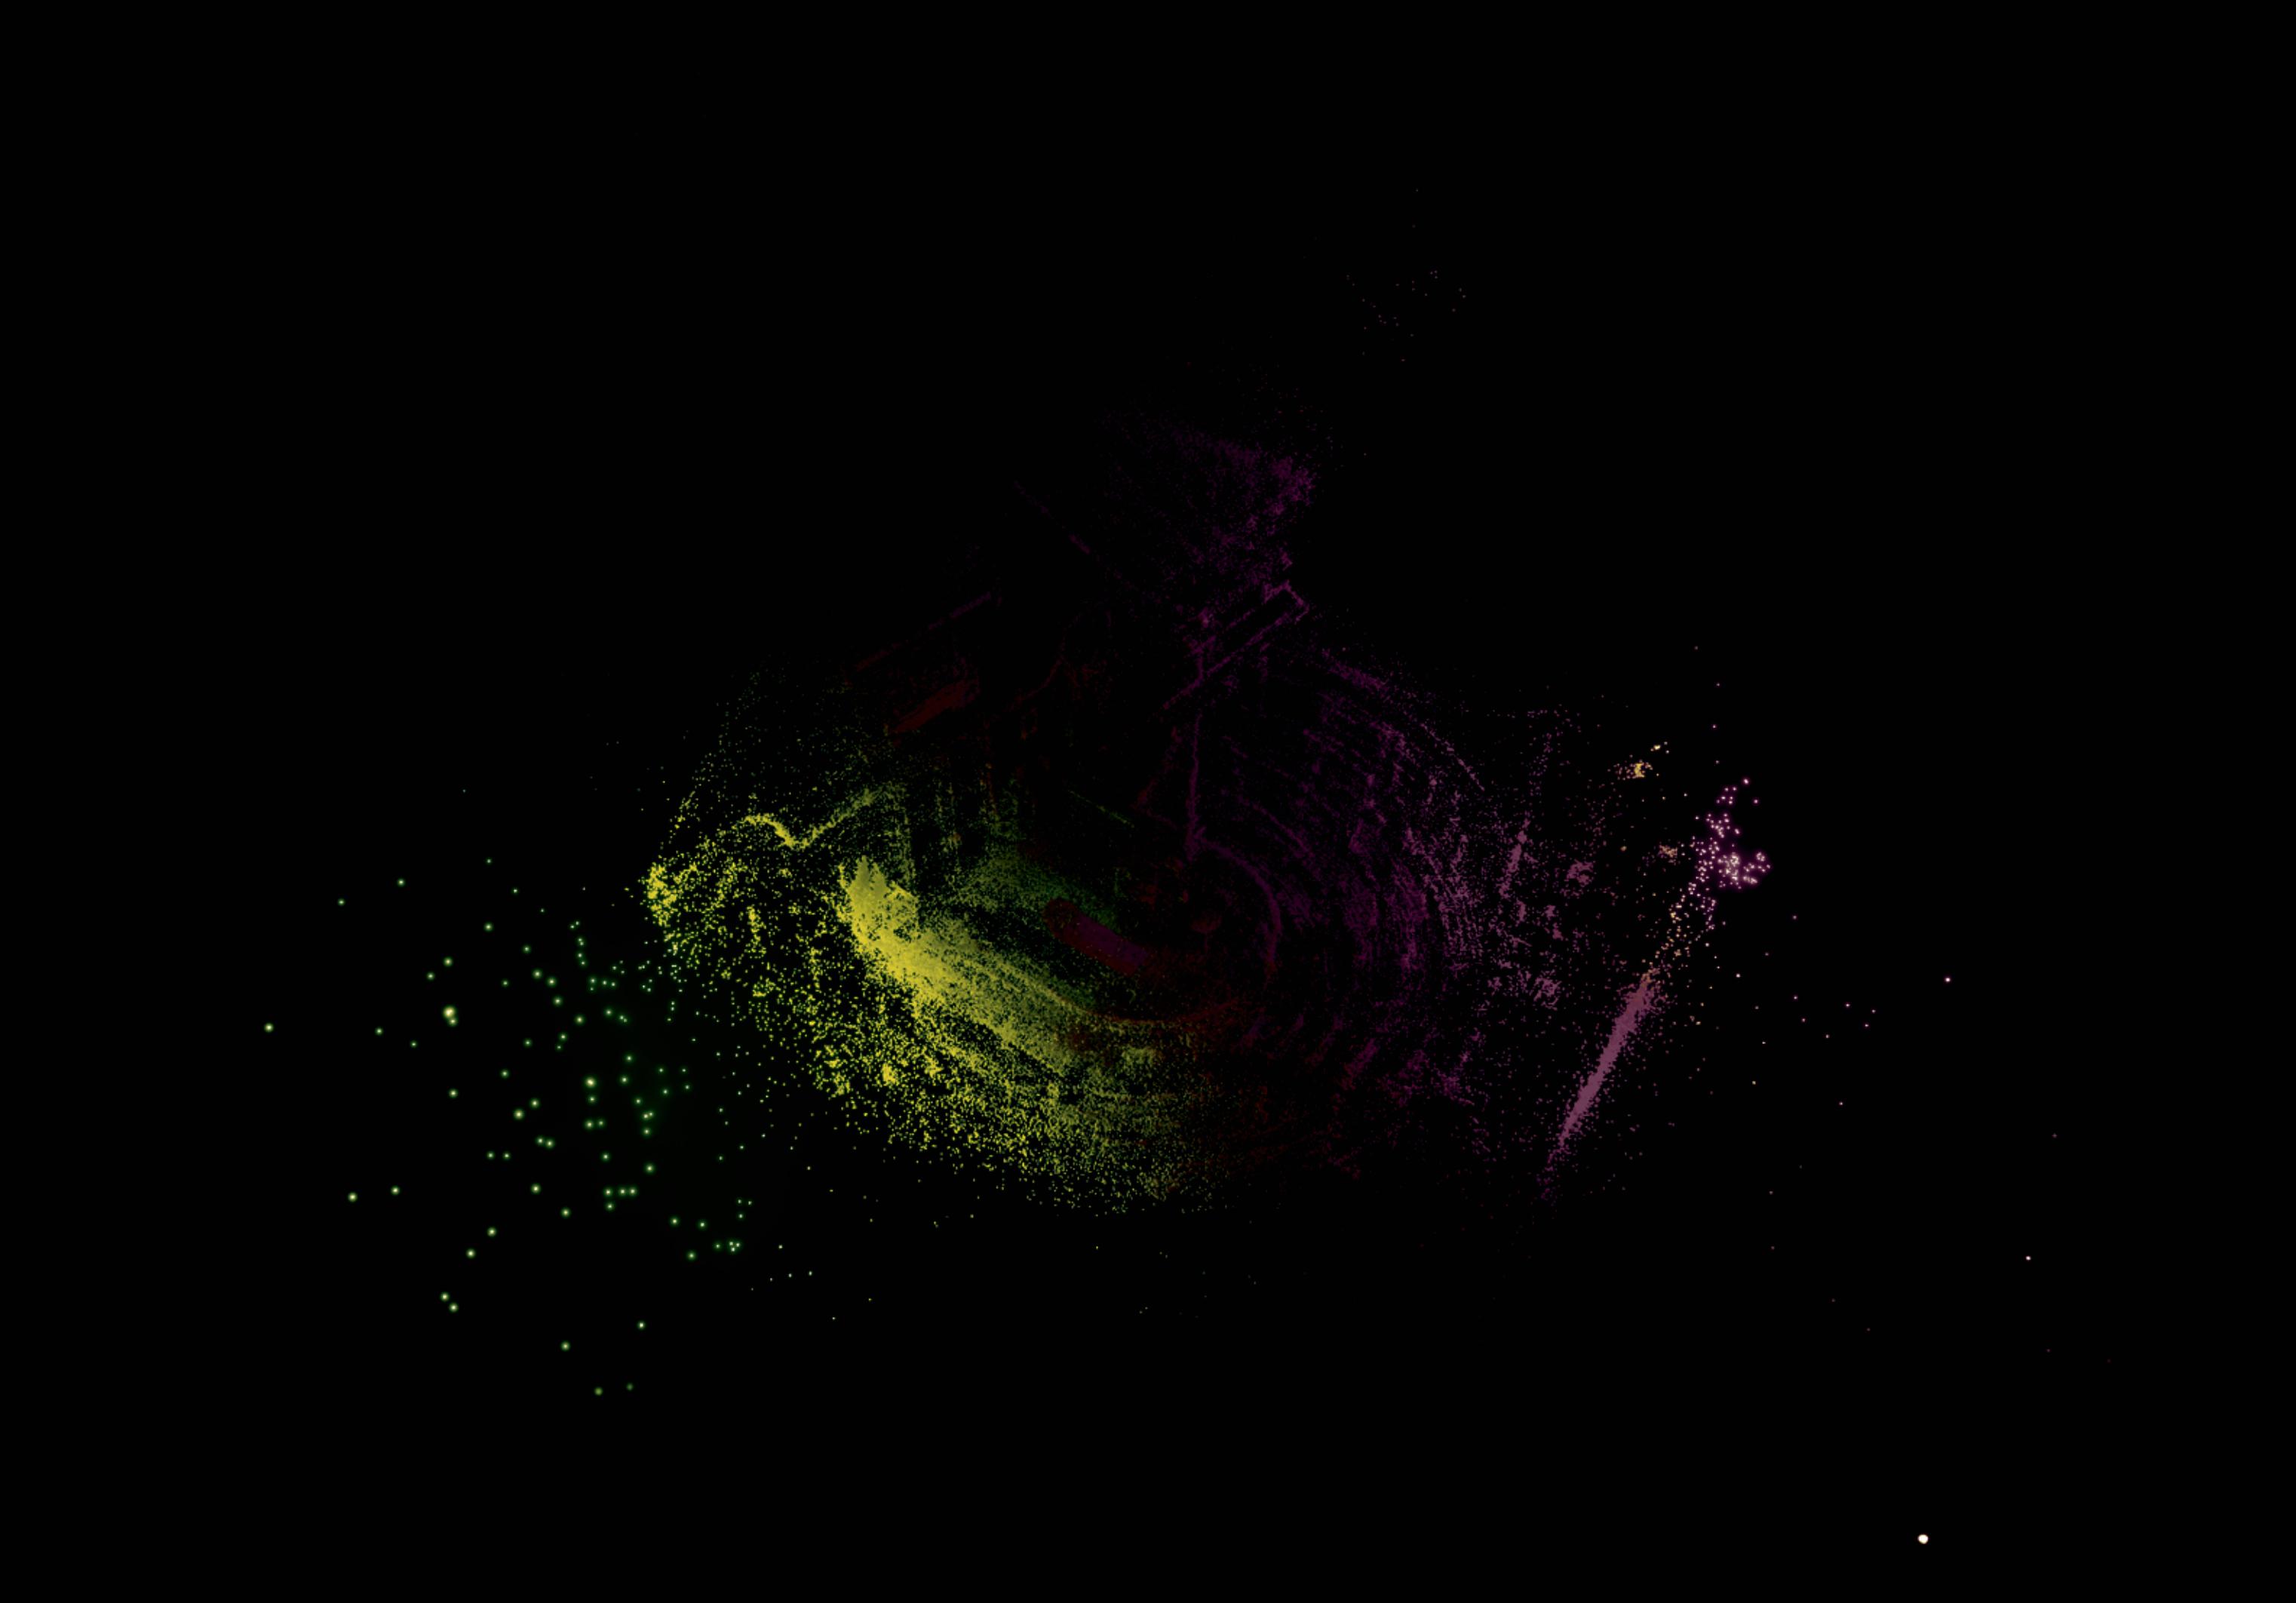

- > From the corner of your eye you catch a glint of something
- > It's a crystal ball, the kind used for scrying
- > You are reminded of the Palantiri from Lord of the Rings

> You reach out and touch it

> Suddenly, all is darkness

You enter a room lined with
busts and paintings

> You walk through room after room, corridor after corridor
> Your footsteps echoing on the polished floors

> As you look at your reflection in the glass vacuum tubes, you hear a woman's voice cry:

"I have seen
My death!"

You think you know what she means

ZANTAC (ranitidine) is a new H2 receptor blocking agent from Glaxo

For further information key the appropriate number

Main therapeutic uses

Results in duodenal ulcer

Results in gastric ulcer

Results in reflux oesophagitis

Symptomatic relief

Prevention of re-ulceration

Specificity of action

Abridged prescribing information

ZANTAC Tablets

Abridged prescribing information

ZANTAC Injection
